selected by the customer and associated with the remote communication unit prior to the fueling transaction;

- c) accessing information defined by the select types of information; and
- d) providing the information to the customer during a transaction.
- 43. (new) The method of claim 42 wherein the receiving step includes receiving identification indicia for the remote communication unit and the accessing step includes accessing information according to the select types of information in a database using the identification indicia.
- 44. (new) The method of claim 42 wherein the indicia includes the select types of information.
- 45. (new) The system of claim 19 wherein the wireless communication electronics comprises a magnetic card reader/writer and the remote communication units comprise magnetic cards.--

REMARKS

By this preliminary amendment, claims 1-18 have been cancelled, and claims 19-45 have been added. No new matter is added by these cancellations or additions. Claims 19-44 correspond identically to claims 1-10, 17-25, and 27-33 of U.S. Patent 6,422,464 ("the '464 patent) and have been added for the purpose of provoking an interference with that patent.

By this preliminary amendment, the Specification has been amended to add related application data. Applicant submits that the changes to the Specification described above do not constitute the addition of new matter, as support for the instant amendments is provided

throughout the as-filed Specification and drawing figures. Accordingly, Applicant respectfully requests that the Examiner approve the changes to the Specification.

A. <u>Effective Filing Dates</u>

This application is a continuation of U.S. Patent Application No. 10/237,933, filed September 10, 2002 (status pending), which in turn is a continuation of U.S. Patent Application No. 09/922,935, filed August 7, 2001 (status pending), which in turn is a continuation of U.S. Patent Application No. 08/670,599, filed June 26, 1996, now U.S. Patent 6,149,055, which in turn is a continuation-in-part of U.S. Patent Application No. 08/421,486 filed April 13, 1995, now U.S. Patent 5,546,523. The effective filing date of this application is April 13, 1995.

The '464 patent claims priority back to various applications. The earliest possible effective filing date of the '464 claims is September 26, 1997, well after the April 13, 1995 priority date of the claims in the present application. Applicant does not admit that the '464 patent claims are actually entitled to this earliest possible date.

B. 37 C.F.R. 1.607

Applicant submits the following information as required by 37 C.F.R. 1.607(a)(1)-(a)(5). The '464 patent issued on July 23, 2002. Therefore, the claims of the present application were pending within one year of issuance of the '464 patent and no explanation under 37 C.F.R. 1.607(a)(6) is necessary.

(1) <u>Identification of Patent</u>

In accordance with 37 C.F.R. 1.607(a)(1), Applicant requests that an interference be declared between the application filed herewith and U.S. Patent 6,422,464.

(2) Proposed Count

In accordance with 37 C.F.R. 1.607(a)(2), Applicant presents the following proposed count, which corresponds identically to claim 42 presented herein and to claim 31 of the '464 patent:

- 42. A method for automatically providing customer preferences during a fueling operation comprising:
- a) receiving indicia from a remote communication unit in association with a fueling transaction;
- b) determining select types of information predefined by the customer using the indicia received from the remote communication unit, the select types of information being selected by the customer and associated with the remote communication unit prior to the fueling transaction;
 - c) accessing information defined by the select types of information; and
 - d) providing the information to the customer during a transaction.

(3) Corresponding Claims of the '271 Application

In accordance with 37 C.F.R. 1.607(a)(3), Applicant identifies all claims (i.e., claims 1-33) of the '464 patent as corresponding to the proposed count.

(4) <u>Corresponding Claims of the Present Application</u>

In accordance with 37 C.F.R. 1.607(a)(4), Applicant identifies claims 19-45 of the present application as corresponding to the proposed count. Claim 19 corresponds exactly to the

proposed count. The remaining claims define the same patentable invention as claim 19 and therefore correspond to the proposed count.

(5) Application of Claims 19-44 to the Specification of the Present Application

In accordance with 37 C.F.R. 1.607(a)(5), Applicant submits the following claim chart showing how claims 19-44, copied from the '464 patent, are supported by the specification of the application submitted herewith. The citations therein are exemplary only and not exclusive.

Appl. Claim	Claims Copied From US Patent 6,422,464	Exemplary Support in Gatto Application I
No.	0,422,404	Application
19	1. A system for automatically providing customer preferences during a fueling operation comprising:	Discloses automatically providing customer preferences during a variety of transactions, including a fueling operation (See, e.g., Col. 1, l. 45-52; and Col. 8, l. 40-60)
	a) a fuel dispenser with an audio/visual customer interface having a display and audio system;	Gas pump with terminal 10 that includes an audio/visual customer interface having at least a display 15 and audio system (e.g., speaker 19 and/or microphone 20)
	b) wireless communication electronics associated with said fuel dispenser and adapted to receive signals including indicia from remote communication units; and	The card reader/writer 13 is a wireless communication electronics associated with the terminal 10 and receives signals including indicia from remote communication units (e.g., magnetic cards 30).
	c) a control system and memory associated with said communication electronics and said customer interface;	Local controller 11 and memory 12
	d) said control system adapted to receive the indicia from a remote communication unit and provide a customer with select information	Controller 11 is adapted to receive the indicia from a remote communication unit (e.g., card 30) and provide a

	the customer.	
33	21. The system of claim 1 wherein	User can modify stored

24	said control system is adapted allow a customer to modify the predefined selected information during a transaction to receive additional selected information.	information during a transaction (Col. 8, 1. 7+)
34	22. The system of claim 21 wherein said control system stores the additional selected information as said selected information for future transactions.	Control system stores the additional selected information as said selected information for future transactions (Col. 8, 1. 7+)
35	23. The system of claim 22 wherein said control system and said communications system are adapted to transmit information to the remote communications unit to store the additional information as the selected information.	Control system and card reader/writer transmit information to the remote communications unit (e.g., card) to store the additional selected information on the magnetic card as said selected information.
36	24. A system for automatically preventing presentment of information based on customer preferences during a fueling operation comprising:	System can prevent presentment of information based on customer preferences during a fueling operation. For example, can prevent the standard display from being displayed
	a) a fuel dispenser with a customer interface adapted to present information to a customer during a transaction;	Gas pump with terminal 10 that includes an audio/visual customer interface having a display 15 and audio system (e.g., speaker 19 and/or microphone 20) to present information to a customer during a transaction
	b) wireless communication electronics associated with said fuel dispenser and adapted to receive signals including indicia from remote communication units; and	The card reader/writer 13 is a wireless communication electronics associated with the terminal 10 of the gas pump and receives signals including indicia from remote communication units (e.g., magnetic cards 30).
	c) a control system and memory associated with said communication electronics and said customer interface;	Local controller 11 and memory 12 are associated with the card reader/writer 13 and the customer interface (e.g., display 15)

	d) said control system adapted to	Controller 11 is adapted to
	present said select information at said	present select information at
	customer interface;	said customer interface
	e) said control system adapted to	Controller 11 receives the
	receive the indicia from a remote	indicia from a remote
	communication unit and prevent	communication unit (e.g., card
	presentment of select information at	30) and prevents presentment
	said customer interface, said select	of select information at the
į	information being selected by the	customer interface (e.g., can
	customer and associated with the	prevent display of the
	remote communication unit prior to	standard menu by providing a
	the transaction.	customer menu; the select
		information is selected by the
		customer and associated with
		the remote communication
ļ		unit prior to the transaction
		(see, e.g., Abstract; Col. 2, 1.
		34-53; and Col 11, 1. 7-19).
37	25. The system of claim 24 wherein	Indicia can include
	the indicia is identification indicia and	identification information read
	said select information is stored in	from card 30 (see, e.g., Fig. 2,
	association with the identification	step 101) or other storage;
}	indicia of the remote communication	card also can store other
	unit and said control system is adapted	stored customer selected
	to identify said select information	information (menu option);
	upon receipt of the identification	controller accesses the select
	indicia and prevent the presentment of	information and provides it to
	the select information accordingly.	customer interface to prevent
		presentment of select
		information (e.g., standard menu).
38	27. The system of claim 24 wherein	Predefined parameters (e.g.,
20	predefined parameters are transmitted	fuel type or amount of fuel)

	information.	

CONCLUSION

For all of the above reasons, Applicant respectfully requests that an interference be declared between the present application and the '464 patent. If the Examiner believes that

prosecution of this continuation application might be advanced through a personal or telephone interview, the Examiner is invited to call the undersigned.

Respectfully submitted,

MINTZ, LEVIN, COHM, FERRIS, GLOVSKY, AND POPEO PC

James G. Gatto
